PRE-HOME CARE SERVICE QUESTIONNAIRE

Our company has been contacted to come to your home to perform diagnostic imaging. Before we schedule this, we need ask a few questions to determine if we have adequate accessibility to your home for our equipment. This information will be provided to the x-ray/ultrasound technologist for review prior to arrival.

Retirement Homes: Require only the 3rd and 4th question to be answered and can be answered by a staff member of the home.

1. Are there steps leading up to your front door? If yes, how many?

Our company policy states the x-ray equipment cannot be brought up more than two steps in total (outside and inside combined). However; depending on the height of the step, there are exceptions). Our equipment also cannot be easily lifted. (Ultrasound equipment N/A)

2. Do you have legal parking available on site if this is a private home?

3. Will the patient be on the main floor where the servicing technologist enters the home?

4. What is the approximate weight and height of the patient?

5. Supine exams (eg. abdomen, pelvis, hips, spine):

Is the patient in a hospital bed?

If no, what type of bed are they in and is it open underneath?

If no, is this bed adjustable? (raise up and down, sit up and back)

Please understand that we may not be able to perform the study due to accessibility and space constraints. Every examination and situation is different.

In some instances, the technologist may cancel the examination upon arrival. This decision is based on their professional assessment and discretion.
